

CIVIL CONSTRUCTION CATALOG

Turning plastic into solutions

Founded in 1994, Tecnoperfil Plásticos was born with the objective of presenting the market with innovative and high quality plastic profiles, especially using PVC. With over 25 years of experience, the company develops solutions for civil construction, industries, services and hydroponic cultivation.

It uses highly specialized production technology as well as the best raw materials, used worldwide and 100% recyclable.

The technical staff of specialists use modern resources, allowing high-performance tools and compounds to be developed, advising customers on the conception and improvement of the items to be manufactured.

Quality Management

It is certified in the 2015 version of NBR Standard - ISO 9001, an international standard that establishes a set of necessary requirements to be met as the basis of a Quality Management System (QMS).

For Tecnoperfil this represents a commitment to the continuous improvement of its processes and products, based on ensuring excellent customer service.

VINYL SHOCK®

The Vinylshock® line is the pioneer in the Brazilian production of Wall Guard Systems and Handrail. They are resistant products that use advanced technology, which undergo rigorous quality, dimensional control and impact resistance tests.

The protectors have an innovative and modern design, which offer practical and versatile solutions to protect and enhance environments.

Available in different models and colors, they are ideal for protecting walls, corners, access ramps, corridors and other surfaces, conserving aesthetics and avoiding unwanted maintenance costs. They can be applied on masonry walls, wood, concrete blocks, precast panels, steel structures and plasterboard.

Product for indoor use.

Meets the standards: ABNT NBR 9077 | ASTM G-21 | ASTM D -256
Meets Anvisa's RDC no. 50.

TECHNICAL FINISHING PROFILES

TEC 191 | 192 | 456

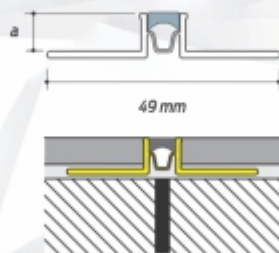

Expansion Joints are joints for ceramic tiles laid with mortar.

They allow the system (mortar/ceramic) to move dilatometrically without the ceramic and substrate suffering detachment or cracking. Its holes in the side flaps ensure excellent fixation under conditions of compression and tension.

Resistant and practical product, available in different colors and heights, for the most diverse technical needs.

According to NBRs 13753, 13754 and 13755, in indoor areas, it is recommended every 32 m².

They are applied with mortar, under the flooring. The mortar ensures it is placed firmly and correctly into position, through the "T" grooves of the pieces.
